ecommerce   Edit   Delete

11/2019 – 02/2020

this is an e-commerce i build with html , css, javascript and jquery . in this web app items and products are been able to be uploaded and bought using ajax (asynchronous functions).
availability of a pay stack payment gate way for purchasing a product.

it is user friendly and also very easy to navigate and access.

it is totally responsive to all screen sizes and users are been able to scroll through products using the touch and slide features.

users are been given the **save for later** ability , this means that an item or product can be saved for later if a user choose to make any future transaction on the same product without having to go through the stress of searching for the products. this save for later feature allow user the space of one week until item is been unsaved.
